### **DETAILED ACTION**

This action is in response to Amendments and remarks filed on September 30, 2005. Claims 1-3 are currently pending.

#### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Myhre et al. US Patent No. 4,786,188.

Regarding Claim 1, Myhre et al. teach (see Fig. 4-5) a purge air flow passage structure for introducing purge air to a space at or near a surface of a light receiving part (83) of an optical probe (83, 130) that detects radiation light (using (130)) of an object, comprising an air flow passage (83, 112, 104, 108, 116) disposed inside the probe for ventilating the purge air, a separation space (122) disposed in the air flow passage and that separates dust in the purge air from the purge air (see Col. 8, lines 13-20), and a filter (118) disposed in the air flow passage, upstream of the separation space (see Fig. 4), that collects dust in the purge air (dust particles larger than opening 118), wherein the filter comprises two or more (upper 118 section and lower 118 section) shielding parts.

#### ***Allowable Subject Matter***

Art Unit: 2878

3. Claims 2-3 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is a statement of reasons for the indication of allowable subject matter:

The invention as claimed, specifically in combination with the shielding parts successively arranged along a direction from an upstream side to a downstream side in the air flow passage to be separated from each other by a predetermined distance, is not disclosed or made obvious by the prior art of record.

#### *Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Milliani et al. US Patent No. 6,766,648 and Myhre et al. US Patent No. 5,146,244, teach similar optical probes having purge air flow passage structures.

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 2878

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
